ProWood FR interior pressure-treated fire-retardant wood

PART 1 - General Product Information
A. Lumber and plywood bearing the ProWood FR mark has a flame spread rating of 25 or less (Class A) when tested in accordance with ASTM E84, “Standard Test Method for Surface Burning Characteristics of Building Materials.” ProWood FR pressure-treated fire-retardant wood shows no evidence of significant progressive combustion when the test is extended for an additional 20-minute period. In addition, the flame front does not progress more than 101/2 feet beyond the centerline of the burners at any time during the test. The flame spread and smoke developed index for each species and product are classified by Underwriters Laboratories Inc. (UL) and meet their premium FR-S classification.
B. ProWood FR pressure-treated fire-retardant wood is manufactured under the independent third-party inspection of Underwriters Laboratories Inc. (UL) Follow-Up Service and each piece shall bear the UL classified mark indicating the extended 30-minute ASTM E84 test and UL’s premium FR-S designation.
C. ProWood FR pressure-treated fire-retardant wood shall be kiln dried after treatment (KDAT). The kiln drying process is monitored by Timber Products (TP), or Southern Pine Inspection Bureau (SPIB).
E. ProWood FR FRTW products comply with AWPA UC-1 and UCFA use category systems. ProWood FR treatment process meets the AWPA T1-19 standard and ProWood FR chemical has been analyzed to confirm the formulation meets AWPA P50-19 standard.
F. ProWood FR UL GREENGUARD GOLD CERTIFICATION
The ProWood FR Fire Retardant has undergone rigorous testing and met stringent standards for low volatile organic compound (VOC) emissions. Products certified to this criterion are suitable for use in schools, offices, and other sensitive environments.

PART 2 - Fire-Retardant Treatment
A. Treatment shall be ProWood FR manufactured by UFP Industries and will be carried out at locations listed under ESR-4373 under UL-Follow Up Service.
B. ProWood FR is an interior “Type A” fire-retardant with individual surface burning characteristics for the species and products listed under UL Certifications.
C. Structural performance of ProWood FR pressure-treated fire-retardant wood has been tested in accordance with ASTM D5564 for lumber and ASTM D5516 for plywood. Evaluation of plywood data is in accordance with ASTM D3201. Evaluation of lumber data is in accordance with ASTM D6305. The resulting design value and span rating adjustments are published in ICC ESR-4373, which includes evaluation of high temperature (HT) strength testing for roof applications.
D. ProWood FR pressure-treated fire-retardant wood is kiln dried after treatment (KDAT) to maximum moisture content of 19% for lumber and 15% for plywood.
E. ProWood FR does not contain VOC’s, urea formaldehyde or formaldehyde, halogens, sulfates, or chlorides.
F. Plywood treated with ProWood FR shall be manufactured under US Product Standards - PS 1 or PS 2. Panels shall have a minimum bond durability of Exposure 1.
G. Grade marked lumber treated with ProWood FR shall be in accordance with PS 20.

PART 3 - Execution
A. ProWood FR pressure-treated fire-retardant wood used in structural applications shall be installed in accordance with the conditions and limitations listed in ICC ESR-4373.
B. ProWood FR pressure-treated fire-retardant wood shall be installed in compliance with the requirements of the applicable building codes and product recommendations.
C. ProWood FR FRTW products shall not be installed in areas where, in service, it is exposed to precipitation, direct wetting, or condensation.
D. As with untreated wood, avoid exposure to precipitation during shipping, storage or installation. Apply a water resistive barrier or underlayment over dry sheathing as soon as practical to avoid precipitation on the panel. Panels that get wet should be allowed to dry before covering or be replaced.

UNIVERSAL FOREST PRODUCTS, INC.

EVALUATION SUBJECT:

PROWOOD® FR FIRE-RETARDANT-TREATED WOOD

1.0 EVALUATION SCOPE

Compliance with the following codes:

Property evaluated:
- Flame spread
- Structural
- Corrosion
- Hygroscopy
- Fire-resistance-rated Wall Assemblies

2.0 USES

ProWood® FR fire-retardant-treated wood is used in areas that are not exposed to the weather or wetting, but may be exposed to dampness where the code permits the use of wood or fire-retardant-treated wood.

3.0 DESCRIPTION

3.1 General:

ProWood® FR fire-retardant-treated wood is lumber and plywood impregnated with ProWood® FR fire-retardant chemicals by a pressure process.

ProWood® FR treatment of lumber of the following species is recognized as being fire retardant:

- Southern Pine
- Douglas Fir
- Western Hemlock
- Alpine Fir
- Lodgepole Pine
- White Spruce
- Red Pine
- Ponderosa Pine
- White Fir
- Hem Fir
- Balsam Fir
- Jack Pine

Spruce-Pine-Fir
Engelmann Spruce
Red Spruce
Black Spruce

ProWood® FR treatment of plywood fabricated with face and back veneers of the following species is recognized as being fire retardant:

- Douglas Fir
- Southern Pine

3.2 Flame Spread:

ProWood® FR fire-retardant-treated wood has a flame-spread index of 25 or less when subjected to ASTM E84 tests and shows no evidence of significant progressive combustion when the tests are continued for an additional 20-minute period.

3.3 Structural Strength and Durability:

The effects of ProWood® FR fire-retardant treatment on the strength of the treated lumber and plywood must be accounted for in the design of the wood members and their connections as required by this section. Load duration factors greater than 1.6 are not permitted to be used in the design.

The strength properties of lumber when treated with ProWood® FR fire-retardant chemicals and used in applications at ambient temperatures up to 150°F (65°C), are subject to the design factors shown in Tables 1 and 2 of this report.

The strength properties of plywood, when treated with ProWood® FR fire-retardant chemicals and used in applications at temperatures up to 170°F (77°C), are subject to the span limitations shown in Table 3 of this report.

3.4 Corrosion:

The corrosion rate of aluminum, carbon steel, galvanized steel, stainless steel, copper or red brass in contact with wood is not increased by ProWood® FR fire-retardant treatment when the product is used as recommended by the manufacturer.

3.5 Hygroscopicity:

ProWood® FR treated wood qualifies as an Interior Type A (HT) fire-retardant wood in accordance with the American Wood Protection Association (AWPA) Standard U1, Commodity Specification H, Use Category UCFA.

4.0 DESIGN AND INSTALLATION

4.1 General:

Structural systems that include ProWood® FR fire-retardant-treated lumber or plywood must be designed
and installed in accordance with the applicable code using the appropriate lumber design value adjustment factors and plywood spans from Tables 1, 2 and 3 of this report. Ventilation must be provided in accordance with the applicable codes.

The design value adjustment factors and plywood load and spans in Tables 1, 2 and 3 of this report are applicable under continuous elevated temperatures resulting from cyclic climatic conditions. They are not applicable under continuous elevated temperatures resulting from manufacturing or other processes that require special consideration in design.

The treated lumber and plywood must only be used in areas (including attic spaces) where the lumber is exposed to temperatures of 150°F (66°C) or less and the plywood is exposed to temperatures of 170°F (76.5°C) or less.

Exposure to precipitation during storage or installation must be avoided. If material does become wet, it must be re-dried or permitted to dry (maximum 15 percent moisture content for lumber and 15 percent moisture content for plywood) prior to covering or enclosure by wallboard or other construction materials.

4.2 Fasteners:

Fasteners used in ProWood® FR fire-retardant-treated wood must be galvanized steel, stainless steel, silicon bronze or copper, in accordance with Section 2304.10.5 of the 2016 and 2015 IBC, Section 2304.9.5 of the 2012, 2009 and 2006 IBC, Section 317.3 of the 2018, 2015, 2012 and 2009 IRC, and Section R319.3 of the 2006 IRC; and must be subject to the design value adjustments indicated in Table 1 of this report.

4.3 Use as a Component of Fire-resistance-rated Wall Assemblies:

4.3.1 One-hour Exterior Wall Assembly: In Type III, Type IV and Type V construction, the exterior wall assemblies must be constructed of ProWood® FR treated wood studs and plywood. The design values for the studs must be adjusted in accordance with Tables 1 and 2. The allowable spans for the plywood sheathing must be in accordance with the spans given in Table 3 for ProWood® FR Wall/Subfloor.

When the fire-resistance rating is required from only the interior side, the wall must be constructed in accordance with Figure 2.

4.3.2 Two-hour Exterior Wall Assembly: In Type III, Type IV and Type V construction, the exterior wall assemblies must be constructed of ProWood® FR treated wood studs and plywood. The design values for the studs must be adjusted in accordance with Tables 1 and 2. The allowable spans for the plywood sheathing must be in accordance with the spans given in Table 3 for ProWood® FR Wall/Subfloor.

When the fire-resistance rating is required from only the interior side, the wall must be constructed in accordance with Figure 3.

5.0 CONDITIONS OF USE

The ProWood® FR fire-retardant-treated wood described in this report complies with, or is a suitable alternative to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

5.1 Strength calculations must be subject to the design factors or span ratings shown in Tables 1, 2 and 3 of this report.

5.2 The design value adjustment factors and span ratings given in this report must only be used for unincised dimension lumber and plywood of the species noted in this report.

5.3 ProWood® FR treated wood must not be installed where it will be exposed to precipitation, direct wetting or regular condensation.

5.4 ProWood® FR treated wood must not be in contact with the ground.

5.5 ProWood® FR lumber must not be ripped or milled as this will alter the surface-burning characteristics and invalidate the flame spread classification. Wall, floor and roof framing, consisting of end cuts, holes, joints such as tongue and groove, bevel, scarf, and lap, may be used.

5.6 Treatment is at the facilities of the listees noted in this report under a quality control program with inspections by ICC-ES and Underwriters Laboratory FR-S, Timber Products Inspection, Inc. (AA-696) or Southern Pine Inspection Bureau (AA-680).

6.0 EVIDENCE SUBMITTED

Data in accordance with the ICC-ES Acceptance Criteria for Fire-retardant-treated Wood (AC66), dated June 2015, (editorially revised April 2018).

7.0 IDENTIFICATION

7.1 Lumber and plywood treated with ProWood® FR fire-retardant chemicals must be identified by the structural grace mark of an approved agency. In addition, all treated lumber and plywood must be stamped with the name of the inspection agency [Underwriters Laboratory FR-S, Timber Products Inspection, Inc. (AA-696) or Southern Pine Inspection Bureau (AA-680)]; Universal Forest Products, name and location; the production plant identification name and location; labeling information in accordance with Section 2303.2.4 of the 2018, 2015, 2012 and 2009 IBC and Section 2303.2.1 of the 2006 IBC or Section R802.1.5.4 of the 2018 and 2015 IRC or Section R802.1.3.4 of the 2012 and 2009 IRC or Section R802.1.3.1 of the 2006 IRC; and the evaluation report number (ESR-4373). Refer to Figure 1.

1. For Surface Temperatures < 100°F, use Untreated Span Ratings
2. Allowable live loads are for unsanded, Structural 1 & 2 Grade plywood, manufactured with Group 1 Species, stress grade S-2 (F=1650 psi), one-and-two span conditions.
3. For allowable live loads, subtract dead loads (assumed to be 8 psi) from total loads listed above.
4. Climate Zone definitions:
   - Zone 1 – Minimum design roof live load or maximum ground snow load ≤ 20 psf (960 Pa)
   - Zone 1A – Southwest Arizona, Southeast Nevada (Area Bounded by Las Vegas-Yuma-Phoenix-Tucson)
   - Zone 1B – All other qualifying areas of the United States
   - Zone 2 – Maximum ground snow load > 20 psf (960 Pa)

5. For other load conditions, contact manufacturer.

(A) Defined to be the total response of measured VOCs falling within the C₆ – C₁₆ range, with responses calibrated to a toluene surrogate. Maximum allowable predicted TVOC concentrations for GREENGUARD Gold (0.22 mg/m³) fall in the range of 0.5 mg/m³ or less, as specified in CDPH Standard Method v1.2.

(B) The sum of all measured normal aldehydes from formaldehyde through nonanal, plus benzaldehyde, individually calibrated to a compound specific standard. Heptanal through nonanal are measured via TD/GC/MS analysis and the remaining aldehydes are measured using HPLC/UV analysis.

(C) Particle emission requirement only applicable to HVAC Duct Products with exposed surface area in air streams (a forced air test with specific test method) and for wood finishing (sanding) systems.

(D) Based on the CA Prop 65 Maximum Allowable Dose Level for inhalation of 3,200 µg/day and an inhalation rate of 20 m³/day

(E) Allowable levels for chemicals not listed are derived from the lower of 1/2 the California Office of Environmental Health Hazard Assessment (OEHHAA) Chronic Reference Exposure Level (CREL) as required per the CDPH/EHLB/Standard Method v1.2 and BIFMA level credit 7.6.2 and 1/100th of the Threshold Limit Value (TLV) industrial work place standard (Reference: American Conference of Government Industrial Hygienists, 6500 Glenway, Building D-7, and Cincinnati, OH 45211-4438).
IMPORTANT: This is your warranty certificate. Attach your invoice and proof of purchase.

UFP Warranty Corporation ("Warrantor") is pleased to offer this 50-year Limited Warranty to you, the installer of a ProWood® FR lumber or plywood product (the "Product(s)").

ATTENTION: This Limited Warranty is only valid on Products purchased after May 1, 2019 and used in the continental United States, Alaska, and Hawaii in an interior application.

INSTALLER COVERAGE
To qualify for this warranty, you must be the installer of the Products on real property that you own or is owned by a third party. This Limited Warranty is not transferable.

TO IDENTIFY A PROWOOD® FR PRODUCT, LOOK FOR THE INK STAMP
It's easy to identify a Product. Simply look for the ink stamp on each Product. Make sure you retain the purchase receipt(s).

In the event of a claim, it will be necessary to present this documentation for all Products that are claimed to have structurally failed.

LIMITED WARRANTY
For a period of fifty (50) years from the date of installation, Warrantor will provide installers who use a Product in an interior application that structurally fail the reasonable cost of repair of the damaged portion of the structure incorporating the Product. This remedy is the installer's sole and exclusive remedy for any Product that structurally fails. For the purposes of this Limited Warranty, "structurally fails" means a reduction in strength below the strength properties published in ESR-4373 caused by the fire retardant chemical in the Product. For clarity, Warrantor is not liable for any structural failure not due to the fire retardant chemical in the Product, and Warrantor is not liable for any damage other than to the Product and any portion of the structure incorporating the Product due to a structural failure.

In addition, while a structure may contain fire retardant treated wood products other than the Products, this warranty does not cover structural failure of fire retardant treated wood products other than the Products.

LIMITATIONS ON WARRANTY
Warrantor will not be required to provide warranty coverage for any Product that:

- Is installed other than in an interior application and as specified on the ink stamp;
- Is used in an unprotected exterior environment;
- Is sawn lengthwise (ripped) or surfaced (sanded/planed/etc.), except that a Product that is plywood may be ripped;
- Has been subjected to "weathering", including, but not limited to, raised grain, splitting, checking, cupping, twisting, warping, shrinkage, swelling, or any other physical or aesthetic property of the wood;
- Delaminates, including delamination of plywood and other laminated wood products;
- Has mold, mildew, or fungal growth;
- Corrodes fasteners, hardware, or any other material(s), including metal materials used, in conjunction with, or to wrap or encapsulate a Product, or structural failure resulting from such an occurrence;
- Is subjected to fire or improper or inadequate ventilation;
- Is used in any Use Category higher than AWPA UC2 (protected from weather but may be subject to sources of moisture);
- Is damaged by physical abuse, acts of God, acts of war, fire, floods (natural or plumbing failure), nature disaster, or other chemical or biological factors;
- Is damaged as a result of deterioration, defects, or failure of building components, including, without limitation, movement, distortion, collapse, or settling of the supporting structure on which the Product is installed;
- Is damaged as a result of a failure of the design of the system used in connection with the installation of the Products;
- Has not been installed in strict accordance with all applicable laws, zoning and/or building codes, and generally accepted construction practices, including, without limitation, the National Forest Product Association’s National Design Specification and the American Plywood Association’s Plywood Design Standard(s) (if no building codes apply, the Product must only be used and installed in applications that meet the International One and Two-Family Dwelling Code or the International Building Code in effect at the time of construction);
- Has not been approved by the building code authority having jurisdiction over the structure;
- Has not been installed in accordance with Warrantor’s installation procedures;
- Has been installed in a roof application, except if (1) the roof application was designed to an industry recognized design customarily used in the construction industry, (2) the attic and/or roof assembly has not exceeded temperatures of 150°F at any time, and (3) all Products used had a minimum of 7/16" in thickness and a minimum of 4 plies;
- Has been abused or placed under or subjected to abnormal use conditions;
- Has not been handled or stored in a covered and protected manner prior to installation;
- Has been subjected to temperatures in excess of 150°F (lumber) and 170° (plywood);
- Is exposed to roof leaks;
- Is exposed to long-term cyclical heat and humidity at temperatures in excess of 150°F (lumber) and 170° (plywood) from time to time;
- Has been used, modified, or otherwise treated in any manner other than as intended by Warrantor;
- Has been installed in-ground or with soil contact;
- Has been installed where the Product is usually immersed in water;
- Has been subjected to regular or continuous contact with water;
- Has been subjected to abnormal environmental conditions, including, but not limited to, air pollution, mold, or mildew; or
- Have not been maintained in a reasonable manner.

Failure to follow any restrictions or warnings supplied with Products shall make the Limited Warranty null and void and of no further effect. Warrantor reserves the right to investigate any claim and inspect the Products for which a claim is made. Any use of the Products must be in accordance with all local zoning and/or building codes. You assume all risk and liability associated with the use of this Product. You should take all necessary steps to ensure the safety of everyone involved in the project, including, but not limited to, wearing the appropriate safety equipment. If a claim is made under this Limited Warranty on a Product that is no longer available, Warrantor reserves the right to substitute a similar product of equivalent value.
THIS WARRANTY SETS FORTH THE ENTIRE RESPONSIBILITY OF THE WARRANTOR. WARRANTOR HEREBY DISCLAIMS ANY OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS OF THE PRODUCT FOR A PARTICULAR PURPOSE. WARRANTOR SHALL NOT BE LIABLE FOR ANY INCIDENTAL, INDIRECT, SPECIAL, OR CONSEQUENTIAL DAMAGES, INCLUDING, WITHOUT LIMITATION, LOSS OF PROFITS, LOSS OF BUSINESS, OR DELAY DAMAGES, ARISING OUT OF THE PURCHASE, USE, OR OWNERSHIP OF THE PRODUCT. PURCHASE OF THE PRODUCT IS ACCEPTANCE OF THE TERMS OF THIS WARRANTY.

CLAIM PROCEDURE
To make a claim under this Warranty, you must, within thirty (30) days of actual or constructive notice of damage covered by this Warranty, do the following:

1. Assemble the following information:
   a. An itemized list of the Products that failed
   b. Proof of Purchase of the product, as shown on the original invoice/receipt
   c. End tag from each Product and/or a photograph or other evidence of the ink stamp from each Product
   d. Photograph(s) and a description of the alleged defect

2. Mail the above information to: UFP Warranty Corp.
   Warranty Information
   2801 East Beltline Ave. NE
   Grand Rapids, MI 49525

3. Upon the request of Warrantor, you will permit Warrantor or its representatives a reasonable time to inspect the Products for which a claim has been filed. Any failure to allow such inspection will void this Limited Warranty with respect to the filed claims. In addition, if you take remedial measures (including, without limitation, not leaving the Product in its installed condition, modifying it, adjusting it, repairing it, or attempting to repair it) prior to Warrantor’s inspection, then this Limited Warranty will be voided with respect to the Products for which remedial measures have been taken.

4. Warrantor, in its sole discretion, may arrange for a certified independent testing agency to conduct strength tests of the Products. If requested, samples of the Products claimed to have structurally failed must be sent to Warrantor along with proof that the Products were removed from the structure in question. If the certified independent testing agency determines that the Product has not structurally failed, installer shall be responsible for all costs related to testing. Warrantor reserves the right to conduct additional sampling and testing.

5. Subject to the terms, conditions, limitations and exclusions of this Limited Warranty, Warrantor will, within sixty (60) days from the date of receipt of notice of your claim, and upon receipt of the proper documentation (including test results), make available to you the reasonable cost of repair of the damaged portion of the structure incorporating the Products.

Some states do not allow limitations on how long an implied warranty lasts and/or do not allow the exclusion of incidental, indirect, special, or consequential damages, so the above limitations and exclusions may not apply to you. This Warranty gives you specific legal rights, and you may have additional rights that vary from state to state.

THERE ARE NO OTHER WARRANTIES THAT EXTEND BEYOND THE DESCRIPTION ON THE FACE OF THIS WARRANTY.
Section 1 - PRODUCT AND COMPANY IDENTIFICATION

Material Name
Wood Treated with Fire-Retardant Materials

Trade Names
Prowood® FR

Chemical Family
Treated wood

Product Use
Where using wood or plywood with fire retardant properties is desired.

Restrictions on Use
None known.

Details of the supplier of the safety data sheet

Company name: UFP Retail, LLC
Address 2801 East Beltline, NE, Grand Rapids MI 49525

Telephone number 616-365-1526
Contact person Regulatory Compliance
Emergency phone number Chemtrec 1-800-429-9300
E-mail compliance@ufpi.com

Section 2 - HAZARDS IDENTIFICATION

Classification in accordance with paragraph (d) of 29 CFR 1910.1200.
Combustible Dust
Skin Corrosion/Irritation - Category 2
Serious Eye Damage/Eye Irritation - Category 2A
Carcinogenicity - Category 1A
Reproductive Toxicity - Category 1B
Specific target organ toxicity - Single exposure - Category 3 (Respiratory system)

GHS Label Elements
Symbol(s)

Signal Word
Danger

Hazard Statement(s)
May form combustible dust concentrations in air.
Causes skin irritation.
Causes serious eye irritation.
May cause cancer.
May damage fertility or the unborn child.
May cause respiratory irritation.
Precautionary Statement(s)

Prevention
Obtain special instructions before use.
Do not handle until all safety precautions have been read and understood.
Use only outdoors or in a well-ventilated area.
Wear protective gloves/protective clothing/eye protection/face protection.
Avoid breathing dust/fume/gas/mist/vapors/spray.
Wash thoroughly after handling.

Response
IF exposed or concerned: Get medical advice/attention.
IF INHALED: Remove person to fresh air and keep at rest in a position comfortable for breathing.
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
IF ON SKIN: Wash with plenty of soap and water.
If skin irritation occurs: Get medical advice/attention.
Take off contaminated clothing and wash before reuse.
Call a POISON CENTER or doctor if you feel unwell.
Specific treatment (see label).

Storage
Store in a well-ventilated place.

Disposal
Dispose of contents/container in accordance with local/regional/national/international regulations.

Other Hazards
None known.

Section 3 - COMPOSITION / INFORMATION ON INGREDIENTS

Depending on the additives applied to the treating solution, this wood may also contain <0.1% of mold inhibitors and/or <0.1% of a colorant. The chemical identity and/or percentage of composition is being withheld as a trade secret. Plywood produced by others is bonded with various low-formaldehyde emission bonding systems.

Section 4 - FIRST AID MEASURES

Inhalation
Move to fresh air. If breathing is difficult, give oxygen. Get medical attention immediately. Some species may cause allergic respiratory reactions with asthma-like symptoms in sensitized individuals.

Skin
Take off contaminated clothing. Wash skin thoroughly with soap and water. Seek medical attention. Prolonged contact with treated wood and/or treated wood dust, especially when freshly treated at the plant, may cause irritation
to the skin. Abrasive handling or rubbing of the treated wood may increase skin irritation. Some wood species, regardless of treatment, may cause dermatitis or allergic skin reactions in sensitized individuals.

**Eyes**
DO NOT rub eyes. Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Then get immediate medical attention.

**Ingestion**
Rinse mouth. If swallowed, get medical attention.

**Most Important Symptoms/Effects**

**Acute**
Causes respiratory tract irritation, skin irritation, eye irritation, allergic reactions. WOOD DUST: May cause nasal dryness, irritation and mucostasis. Coughing, wheezing, sneezing, sinusitis and prolonged colds have also been reported. Depending on wood species may cause respiratory sensitization and/or irritation. Symptoms can include irritation, redness, scratching of the cornea, and tearing. May cause eczema-like skin disorders (dermatitis). Airborne treated or untreated wood dust may cause nose, throat, or lung irritation and other respiratory effects.

**Delayed**
May cause cancer by inhalation. May damage fertility or the unborn child.

**Indication of any immediate medical attention and special treatment needed**
Treat symptomatically. May aggravate respiratory ailments such as asthma and bronchitis.

---

**Section 5 - FIRE FIGHTING MEASURES**

**Extinguishing Media**

**Suitable Extinguishing Media**
Carbon dioxide, regular foam, dry chemical, water spray, or water fog.

**Unsuitable Extinguishing Media**
Do not scatter spilled material with high-pressure water streams.

**Special Hazards Arising from the Chemical**
Combustible dust. May form combustible dust concentrations in air. Avoid generating dust; fine dust dispersed in air in sufficient concentrations, and in the presence of an ignition source is a potential dust explosion hazard. Depending on moisture content, and more importantly, particle diameter and airborne concentration, wood dust in a contained area may explode in the presence of an ignition source. Wood dust may similarly deflagrate (combustion without detonation like an explosion) if ignited in an open or loosely contained area. An airborne concentration of 40 grams (40,000 mg) of dust per cubic meter of air is often used as the LEL for wood dusts. Reference NFPA Standards- 654 and 664 for guidance.

**Hazardous Combustion Products**
Oxides of carbon, oxides of nitrogen.

**Fire Fighting Measures**
Wet down with water to reduce likelihood of ignition or dispersion. Move material from fire area if it can be done without risk. Avoid inhalation of material or combustion by-products. Stay upwind and keep out of low areas. Keep unnecessary people away, isolate hazard area and deny entry. The presence of the fire-retardant chemical in treated wood may reduce the flammability hazard to some extent.

**Special Protective Equipment and Precautions for Firefighters**
Wear full protective firefighting gear including self-contained breathing apparatus (SCBA) for protection against possible exposure.

---

**Section 6 - ACCIDENTAL RELEASE MEASURES**

**Personal Precautions, Protective Equipment and Emergency Procedures**
Eliminate all sources of ignition. Wear personal protective clothing and equipment, see Section 8. Avoid dust generation and accumulation. Avoid dust formation. Avoid breathing dust.
Methods and Materials for Containment and Cleaning Up
Collect material in appropriate container for disposal. Avoid dispersal of dust in the air (i.e., clearing dust surfaces with compressed air). Collect using a vacuum cleaner with a HEPA filter or wet and scoop up dry spills. Dust deposits should not be allowed to accumulate on surfaces, as these may form an explosive mixture if they are released into the atmosphere in sufficient concentration. Avoid sweeping spilled dry material. If sweeping of a contaminated area is necessary, use a dust suppressant agent. Eliminate all sources of ignition. Keep unnecessary people away, isolate hazard area and deny entry.

Environmental Precautions
Avoid release to the environment.

Section 7 - HANDLING AND STORAGE

Precautions for Safe Handling
Avoid breathing dust. Avoid contact with skin and eyes. Wash thoroughly after handling. Wear respiratory protection. Contaminated work clothing must not be allowed out of the workplace. Use only outdoors or in a well-ventilated area. Wear protective gloves/clothing and eye/face protection. Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Minimize dust generation and accumulation. Routine housekeeping should be instituted to ensure that dusts do not accumulate on surfaces. Avoid significant deposits of material, especially on horizontal surfaces, which may become airborne and form combustible dust clouds and may contribute to secondary explosions. Dry wood dust material is defined as having a water content less than 25% by weight. Sweep or vacuum but avoid generating dust. Avoid working with freshly treated wood. Do not burn treated wood. Gently moisten dust before it is collected. Clothing should be removed and replaced if it becomes wet due to contact with freshly treated wood.

Conditions for Safe Storage, Including any Incompatibilities
Store in a well-ventilated place.
Store and handle in accordance with all current regulations and standards. Avoid heat, flames, sparks and other sources of ignition. Store containers in a cool, dry, well-ventilated place. Store away from incompatible materials (see Section 10, Stability and Reactivity).

Incompatible Materials
strong oxidizing agents, reducing agents.

Section 8 - EXPOSURE CONTROLS / PERSONAL PROTECTION

Component Exposure Limits

<table>
<thead>
<tr>
<th>Component</th>
<th>Exposure Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wood/Wood dust</td>
<td>N/A</td>
</tr>
<tr>
<td>ACGIH:</td>
<td>1 mg/m3 TWA Inhalable fraction</td>
</tr>
<tr>
<td>NIOSH:</td>
<td>1 mg/m3 TWA dust</td>

</tr>
<tr>
<td></td>
<td>6 mg/m3 STEL inhalable particulate matter</td>
</tr>
</tbody>
</table>

ACGIH - Threshold Limit Values - Biological Exposure Indices (BEI)
There are no biological limit values for any of this product's components.

Engineering Controls
Ventilation equipment should be explosion-resistant if explosive concentrations of material are present. Provide local exhaust or process enclosure ventilation system. Ensure that dust-handling systems (such as exhaust ducts, dust collectors, vessels, and processing equipment) are designed in a manner to prevent the escape of dust into the work area (i.e., there is no leakage from the equipment). Ensure compliance with applicable exposure limits.

**Individual Protection Measures, such as Personal Protective Equipment**

**Eye/face protection**
Wear safety glasses with side shields or chemical safety goggles.

**Skin Protection**
Wear appropriate work clothing. Wear fire/flame resistant/retardant clothing. Refer to NFPA 2112, Standard on Flame-Resistant Garments for Protection of Industrial Personnel Against Flash Fire and NFPA 2113, Standard on the Selection, Use, Care and Maintenance of Flame-Resistant Garments for Protection of Industrial Personnel Against Short-duration Thermal Exposures from Fire (2015).

**Respiratory Protection**
If engineering controls do not maintain airborne concentrations to a negligible level, an approved respirator must be worn. A NIOSH approved air-purifying respirator with an appropriate cartridge or canister may be appropriate under certain circumstances where airborne concentrations are expected to exceed exposure limits.

**Glove Recommendations**
Wear general purpose work gloves: flame-resistant.

**Other Information**
No additional information is available.
Section 10 - STABILITY AND REACTIVITY

Reactivity
No reactivity hazard is expected.

Chemical Stability
Stable at normal temperatures and pressure.

Possibility of Hazardous Reactions
Will not polymerize.

Conditions to Avoid
Avoid heat, flames, sparks and other sources of ignition. Avoid accumulation of airborne dusts. Avoid contact with incompatible materials.

Incompatible Materials
strong oxidizing agents, reducing agents.

Hazardous decomposition products
oxides of carbon, oxides of nitrogen, aliphatic aldehydes, Polycyclic aromatic hydrocarbons.

Section 11 - TOXICOLOGICAL INFORMATION

Information on Likely Routes of Exposure

Inhalation
May cause respiratory irritation, allergic reactions, nasal cancer. WOOD DUST: Dust may be irritating to the nose and throat. Prolonged exposure to wood dusts by inhalation has been reported to be associated with nasal and paranasal cancer. May cause nasal dryness, irritation and mucostasis. Coughing, wheezing, sneezing, sinusitis and prolonged colds have also been reported. Depending on wood species may cause respiratory sensitization and/or irritation.

Skin Contact
Causes irritation, allergic reactions. Skin contact with wood dusts may cause erythema, blistering, and sometimes erosion and secondary infections occur. May cause eczema-like skin disorders (dermatitis).

Eye Contact
Causes serious eye irritation. Symptoms can include irritation, redness, scratching of the cornea, and tearing.

Ingestion
Ingestion of harmful amounts is unlikely. Ingestion of dusts generated during working operations may cause nausea and vomiting. Certain species of wood and their dusts may contain natural toxins, which can have adverse effects in humans.

Acute and Chronic Toxicity

Component Analysis - LD50/LC50
The components of this material have been reviewed in various sources and the following selected endpoints are published:

Proprietary Ingredient #1 (Proprietary)
Oral LD50 Rat >2000 mg/kg
Dermal LD50 Rabbit >5000 mg/kg

Proprietary Ingredient #2 (Proprietary)
Oral LD50 Rat 5750 mg/kg
Dermal LD50 Rabbit >7940 mg/kg

Boric acid (H3BO3) (10043-35-3)
Oral LD50 Rat 2660 mg/kg
Dermal LD50 Rabbit >2000 mg/kg
Inhalation LC50 Rat >0.16 mg/L 4 h (no deaths occurred)

Product Toxicity Data
Acute Toxicity Estimate
Immediate Effects
Causes respiratory tract irritation, skin irritation, eye irritation, allergic reactions. May cause nasal dryness, irritation and mucostasis. Coughing, wheezing, sneezing, sinusitis and prolonged colds have also been reported. Depending on wood species may cause respiratory sensitization and/or irritation. Symptoms can include irritation, redness, scratching of the cornea, and tearing. May cause eczema-like skin disorders (dermatitis). Airborne treated or untreated wood dust may cause nose, throat, or lung irritation and other respiratory effects.

Delayed Effects
May cause allergic reactions, nasal cancer. Prolonged or repeated inhalation of wood dusts may cause recurrent bronchitis. Prolonged exposure to wood dusts by inhalation has been reported to be associated with nasal and paranasal cancer. Chronic exposure to wood dusts can result in pneumonitis, and coughing, wheezing, fever and the other signs and symptoms associated with chronic bronchitis.

Irritation/Corrosivity Data
Causes skin irritation, eye irritation, respiratory tract irritation.

Respiratory Sensitization
Prolonged or repeated exposure may result in hypersensitivity.

Dermal Sensitization
Repeated exposure may result in contact or sensitization dermatitis.

</tbody>
</table>

May cause cancer by inhalation. Untreated wood dust or saw dust: The International Agency for Research on Cancer (IARC) classifies untreated wood dust as a Group I human carcinogen. The classification is based primarily on IARC’s evaluation of increased risk in the occurrence of adenocarcinomas of the nasal cavities and paranasal sinuses associated with occupational exposures of untreated wood dust. Epidemiological studies have been reported on carcinogenic risks of employment in the furniture making industry, the carpentry industry, and the lumber and sawmill industry. IARC has reviewed these studies and reports that there is sufficient evidence that nasal carcinomas have been caused by employment in the furniture-making industry where the excess risk is associated with exposure to untreated wood dust or sawdust from hardwood species. IARC concluded that epidemiological data are not
sufficient to make a definite assessment of the carcinogenic risk of employment as a carpenter or worker in a lumber mill or sawmill.

**Germ Cell Mutagenicity**
No data available.

**Tumorigenic Data**
No data available

**Reproductive Toxicity**
May damage fertility or the unborn child.

**Specific Target Organ Toxicity - Single Exposure**
respiratory system

**Specific Target Organ Toxicity - Repeated Exposure**
No target organs identified.

Section 15 - REGULATORY INFORMATION

U.S. Federal Regulations
None of this product's components are listed under SARA Sections 302/304 (40 CFR 355 Appendix A), SARA Section 313 (40 CFR 372.65), CERCLA (40 CFR 302.4), TSCA 12(b), or require an OSHA process safety plan.

SARA Section 311/312 (40 CFR 370 Subparts B and C) reporting categories
Combustible Dust; Carcinogenicity; Reproductive Toxicity; Skin Corrosion/Irritation; Serious Eye Damage/Eye Irritation; Specific Target Organ Toxicity

U.S. State Regulations
The following components appear on one or more of the following state hazardous substances lists:

<table>
<thead>
<tr>
<th>Component</th>
<th>CAS</th>

The following statement(s) are provided under the California Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65):

⚠️ WARNING: Drilling, sawing, sanding or machining wood products can expose you to wood dust, a substance known to the State of California to cause cancer. Avoid inhaling wood dust or use a dust mask or other safeguards for personal protection. For more information go to www.P65Warnings.ca.gov/wood.

Canada Regulations
Canadian WHMIS Ingredient Disclosure List (IDL)
Components of this material have been checked against the Canadian WHMIS Ingredients Disclosure List. The List is composed of chemicals which must be identified on MSDSs if they are included in products which meet WHMIS criteria specified in the Controlled Products Regulations and are present above the threshold limits listed on the IDL.

| Boric acid (H3BO3) | 10043-35-3    | 1 %   |
